**DETAILED ACTION**

***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 24-38, drawn to an apparatus for applying electrical energy to a patient's outer skin coupled to an electrode assembly to remove the stratum corneum of the patients outer skin without removing the entire epidermis layer.
  - II. Claim 39, drawn to an apparatus for applying electrical energy to a patients skin wherein the electrode assembly is configured to remove the stratum corneum while maintaining a temperature at the target site below about 50 degrees centigrade.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claims relating to the subcombination do not require the power supply apparatus to maintain the temperature at the target site below 50 degrees.

Art Unit: 3763

3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

*Allowable Subject Matter*

4. Claims 1-23 are allowed.
